

BA9221 BA9221F

Digital-to-analog converter, 12 bit

The BA9221 and BA9221F are 12-bit D/A converters.

These ICs have a very fast conversion time. They are for use on machines with a digital-to-analog control system.

Features

- available in DIP20 and SOP22 packages
- 12-bit monotonic conversion
- full scale current (I_{FS}) = 4 mA
- setting speed is as low as 250 ns
- built in reference supply voltage
- can be as multipliers

Applications

- digital audio equipment
- digital control attenuators
- electrical musical instruments
- servo controllers
- digitally controlled power supply

Precautions for use

The pin connections for the BA9221 and the BA9221F are different. Be careful when using these ICs interchangeably.
